STIC-Biotech/ChemLib

Subject:

sequence search for 10/713/137

Please search:

1) SEQ ID NO: 2 and 3 (each of these sequences is 24 nucleotides in length). Please limit the search results to nucleic acids that are of a length of 50 nucleotides or less.

2) SEQ ID NO: 1 (258 nucleotides in length)

The CRF has been entered:

http://expoweb1:8001/cgi-bin/expo/BioInfo/bioquery.pl?APPL_ID=10713137

Please provide a printout of the first 40 results.

Thank you,

Amanda Shaw Patent Examiner Art Unit 1634 Remsen 2E78 Mailbox: REM 2C70 571-272-8668 CREV

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of il consigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between a sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. Consensus quality: 174250 bases at least Q40
Consensus quality: 175616 bases at least Q30
Consensus quality: 1756727 bases at least Q30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  defined as mismatch positions that had a base quality of >= 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sus scrofa (pig)

regions were either double-granded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30 Mouse BAC Library constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBAACB3.6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /organism="Mus musculus"

Quality coverage: 12.2 in Q20 bases, agarose-fp Quality coverage: 12.0 in Q20.

NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             167738: contig of 26584 bp in length 67839 203042: contig of 35204 bp in length 03043 203142: gap of 100 bp 03043 203142: gap of 100 bp 13143 256456: contig of 33314 bp in length 1. 236456

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Discus Doublastics of Molecular and Human Genceme Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA.

Baylor Plaza, Houston, TX 77030, USA.

On Oct 9, 2002 this sequence version replaced gi:21736362.

The sequence in this assembly is a combination of BAC based reads and whole genome shedgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-casffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads Both and sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

May 13, 2003 Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 Huis sequence version replaced gi:23123790.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bom.tuc.edu/projects/rat/). Each contrig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           * NOTE: Stimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                   Submitted (24-NOV-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120 240200) (120

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Daylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:24819147.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.imc.edu/projects/ratl/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table. * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

* NOTE: This sequence may represent more than one clone. Consensus quality: 286975 bases at least Q40
Consensus quality: 291712 bases at least Q30
Consensus quality: 295672 bases at least Q30
Estimated insert aize: 299042; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation Center: Baylor College of Medicine Center clone name: CH230-126J7 Assembly program: Atlas 3.0; Center project name: GKWN

NOTE: This is a 'working draft' sequence. It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary only the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
